made to measure (m2m) made easy

The most effective compression garments for your lymphoedema patients.
Introduction

Lymphoedema is a chronic condition which, if untreated, has the potential to deteriorate. One of the elements of successful treatment is the use of quality compression garments.

medi UK offers the most comprehensive range of sizes and styles off the shelf (OTS) of compression garments. However, we are aware that some patients require bespoke garments that address their individual physical requirements. Therefore we are able to offer a comprehensive made to measure (m2m) range.

This m2m booklet is designed to guide you through the process in order to choose the most effective m2m garment for your patient. In the back of the booklet you will find tables for your final choice of product summarising the available options and codes.
### Ordering process guide

#### m2m overview

Overview of tailor made compression hosiery

Our aim
Our aim is to provide you with top quality made-to-measure garments that are both comfortable and effective for your patients. Each garment is tailor made specifically to your patients needs. Every m2m garment from medi UK is manufactured in Germany and we aim to get it to you as soon as possible. The time taken to do this will depend upon the complexity of the garment and the colour choice; our average turnaround is six working days for round knit garments, eight working days for flat knit – trend colours may take a little more time due to the extended dying process.

What we need from you to help make the perfect garment

Measurements
A measurement form with all relevant parts completed. Accurate measurements are a very important part of this process and it is a combination of length and circumference measurements that will allow us to make a comfortable and effective garment. medi m2m pads are supplied with a measuring guide, if you would like further details on how to measure accurately please contact your medi Account Manager or our team in Hereford.

Product details
In addition to the measurements we need to know the fabric, style of garment, compression class and colour of the garment before we can start making it for you. If one or more of these details are missing we will have to come back to you for clarification and this may delay the manufacturing process. Our m2m forms are laid out to help make sure that these essential details are provided.

Optional extras
These are extra items that may help your patient with their garment – for example a zip, a silicone top band or a silk lining. Sometimes it helps with complex requests if you send in a diagram or photograph with the order form; this will be passed to our manufacturing team to help us to get it right first time.

The Drug Tariff
A selection of styles of mediven garments m2m are available on FP10/GP10. For further details please contact your Account Manager or our team in Hereford.

We are here to help.
We understand m2m and take pride in providing all the support that you need to make the whole process as simple as possible for you and your patients. In addition to our dedicated Account Managers we have a specialist m2m team in Hereford who will be able to assist with technical questions. We also have a simple coding system to help you to identify the correct m2m code in your Procurement System. If you need any additional information, code lists, measurement pads or further support with m2m please contact your medi Account Manager or our Hereford team by telephone on 01432 373508, by email at m2m@mediuk.co.uk or by fax on 01432 373510.
Further information can also be found on our website www.mediuk.co.uk/compression/made-to-measure.
made to measure
Choice of compression class
medm2m garments comply with the strict standards that are laid down by the ‘Reichs-Ausschuss für Lieferbedingungen’ (RAL) Institute. This is the gold standard for compression garments. All medm2m garments are guaranteed to provide effective compression for 6 months of daily use if used and laundered correctly.

Selection of the correct compression class (ccl) will help to ensure that your patients receive a garment that is suited to their condition:

**RAL class 1 (18 – 21mmHg)**
Prevention or early treatment of lymphoedema, venous disease and for use on palliative limbs.

**RAL class 2 (23 – 32mmHg)**
Mild / moderate lymphatic conditions, pronounced varicosis with oedema present and after healing minor ulcers.

**RAL class 3 (34 – 46mmHg)**
Lymphoedema, significant varicosis or after healing long standing ulcers; use if condition fails to respond to class 2.

**RAL class 4 (min. 60 mmHg)**
Lymphoedema and elephantiasis.
Does your patient require m2m compression?

Some patients will require m2m garments to optimise the compression for their condition.

Many factors could contribute to patients requiring m2m garments such as the shape, size or volume of the limb, tissue changes or the need for options that are not available from stock. Our aim is to offer effective control of oedema with a garment that is as comfortable to wear and easy to use as possible. Every garment is made specifically to your requests so the range is limitless – if you want something special medi will be able to help.

At times compression is not always appropriate. In the following situations mediven compression is contraindicated.

Contraindications:
According to the guidelines of the German Phlebological Society (published in 1996, German Journal ‘Phlebologie’)

Absolute contraindications:
Advanced, peripheral arterial occlusive disease, decompensated heart disease, septic phlebitis, phlegmasia coerulea dolens.

Relative contraindications:
Suppurative dermatoses, intolerance of compression stocking fabric, sensory disturbances of the limb, advanced peripheral neuropathy, primary chronic arthritis. medi assumes no liability as a result of any contraindicated use of this product.

Note
m2m hosiery is tailor made for your patient. In order to help our specialist m2m department tailor the garment to your patients requirements including photos and diagrams can help this process. Photos can help with manufacturing of complex garments (these photos are only used for the manufacturing process).

Choice of compression class
Summary of tailor made compression hosiery
## Lower limb garment options

### 3D panty top

**Advantage**

Anatomically shaped panty top
The shape of the 3D panty top is determined by the circumferential measurements and lengths in the panty area. Standard for all mediven flat knit garments. The perfect fit on the abdomen and bottom, shaping of the abdomen and bottom.

### Oblique borders

**Advantage**

- **'Flat oblique'**
  - Anatomically correct border
  - Standard for all mediven flat knit garments. Knitted fabric for outer leg extended by x cm.
  - Optimum anatomical fit, appropriate for routine presentations.

- **'Steep oblique'**
  - Anatomically correct border
  - Knitted fabric for outer leg extended by x cm.
  - Optimum anatomical fit, ideal for larger circumferences.

### Anterior thigh longer

**Advantage**

Accurate pressure gradient up to groin
Anterior thigh extended.
Optimum anatomical fit where low buttock fold is present to ensure appropriate compression on the anterior thigh.

### Comfort heel

**Advantage**

- **Standard heel**
  - Individual angle at the heel
  - The individual angle is calculated from the measurements you supply. 
  - ‘cY’ = Standard.
  - Optimum wearing comfort.
Styles • made to measure • 17

Ordering Information

**Tips**

medi always produces flat knit products with an oblique border.

The standard is ‘flat oblique’ = approx. 5% of the circumference. A ‘steep oblique’ = approx. 10% of the circumference and can be selected as an option. The obliques optimise the fit around the top of the thigh.

Where on the measurement form?

The ‘flat oblique’ is standard for all mediven garments. You do not need to make a selection on the measurement form.

Where on the measurement form?

Mark ‘steep oblique’ with a cross.
### Lower limb garment options

<table>
<thead>
<tr>
<th>Advantage</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Ellipse form at ‘E’</strong></td>
<td>Additional knit marks added at the knee to create a natural profile for patients who have limited mobility and tend to spend most of their time with the knee bent (e.g. people in wheelchairs). To reduce excessive pressure on the veins at the back of the knee and the major lymphatic trunks. Also reduces wrinkles in the fabric.</td>
</tr>
<tr>
<td><strong>Y-knitting marks = 90° heel</strong></td>
<td>Additional Y-knitting marks in heel and arch areas, reducing pressure on the instep and to bridge deep skin creases.</td>
</tr>
<tr>
<td><strong>Oblique forefoot</strong></td>
<td>Oblique line of compressive knitted fabric, standard for all mediven flat knit garments, optimising pressure gradient down to the metatarsophalangeal joints with an anatomical gradient, no circular constriction in the forefoot.</td>
</tr>
<tr>
<td><strong>Long sole</strong></td>
<td>Extension of the compressive knit along the sole of the foot, optimising the fit in the forefoot, relieving pressure on the toes with closed toe garments.</td>
</tr>
<tr>
<td><strong>Soft toe</strong></td>
<td>Particularly soft and elastic knitted fabric for the toe area, improved comfort for particularly sensitive toes.</td>
</tr>
</tbody>
</table>

---

18 • made to measure • Styles
**Tips**

The ellipse form enhances comfort for people who spend most of their time sitting down. It compensates for the longer distance at the knee when sitting and thus reduces the pressure on the patella. Always give the measurement ‘(length) back of the knee’. This is measured close to the body from the fold in the back of the knee to the heel with the patient standing. Note that ‘E’ must be at least 3 cm longer than ‘(length) back of the knee’. Attention! For patients with voluminous knees (lipoedema) or a large ‘CE’ measurement, the incorporation of ellipses increases wrinkling in the knee region. Wrinkles may also form below the patella. Do not use ellipses here.

**Where on the measurement form?**

Mark ‘Ellipse form’ with a cross. Please also show the height of the back of the knee separately.

Standard = 4 cm

Minimum = 2 cm

Maximum = 8 cm

Give any deviation from standard in cm in the field ‘Special request’.

**Tips**

The incorporation of Y-knitting marks at the ankle holds the foot in about 90° flexion.

**Where on the measurement form?**

Mark ‘Y-knitting mark’ with a cross.

**Tips**

medi produces all flat knit garments with an ‘oblique foot border’. This guarantees the best possible fit to follow the anatomical line of the metatarsophalangeal joints. It also prevents constriction of the forefoot. The ‘oblique border’ is standard for both open and closed toes. The oblique border of the compressive knit is given by the difference between the medial foot length ‘IA’ and the lateral foot length ‘IA’. The largest possible oblique is 4 cm.

**Where on the measurement form?**

Mark ‘open’ or ‘closed’ toe with a cross.

Also please give the dimensions

- ‘L’ (total length)
- ‘IA’ (medial length)
- ‘IA’ (lateral length)

**Tips**

The long sole optimises the fit in the forefoot region. It can be advantageous where foot deformities such as hallux valgus or hammer toe are present. Knitting the compressive knit along the sole of the foot gives the stocking a circular grip at the metatarsophalangeal joints. This stops the foot section slipping back towards the heel. The length of the long sole depends on ‘CA’ and is produced automatically.

**Where on the measurement form?**

Mark ‘Long sole’ field with a cross.

**Tips**

This will be incorporated in the length measured - no additional measurement required.

**Where on the measurement form?**

Mark ‘Soft toe’ with a cross.

</tbody>
</table>
**Lymph pads Advantage**
Incorporation of medi lymph pads, pre-formed silicone pads and padding materials

- Specific pressure increase over the oedematous region or behind the malleolus.

**Lymph pads Advantage**
Incorporation of medi lymph pads

- Local increase of targeted pressure where required.

**Lining material Advantage**
Lining with soft smooth material (texture similar to that of microfibre)

- Additional comfort for sensitive areas.

**Top bands Advantage**
Most common method of securing stockings (AG, AF and AD)

- Effective positioning of garments.

**Waist attachments Advantage**
Support of AG stockings at the waist

- Alternative fastening method for thigh length garments, can be linked bilaterally.

---

**Ordering Information**

**Tips**

- Used when additional local compression is necessary or if support is required for dispersing fibrosis. Levamed pads and medi lymph pads that are positioned on the basis of measuring points can be incorporated directly during manufacture or retrospectively. For this, please give the exact size and positioning points. A photo or a sketch of the exact location will help with manufacturing.

**Where on the measurement form?**

- Please state choice and document the position and shape etc. medi will then make these according to your individual instructions (Special request).

**Tips**

- Lymph pads can be added at the time of manufacturing or retrospectively.

**Where on the measurement form?**

- Please state the position, size and shape. medi will then make these according to your individual instructions (Special request).

**Tips**

- Please always give us the exact size and positioning of the lining material. Lining material can also be added retrospectively.

**Where on the measurement form?**

- Add silk.

**Tips**

- medi needs the overall length IT for making up AG stockings with a waist attachment.

**Where on the measurement form?**

- Please select the required 'top band' and provide any possible non-standard top band measurements.

- Mark 'Waist attachment' and 'left / right position' with a cross and enter IT in the field 'Special request'.

---

**Ordering Information**

**Tips**

- Where on the measurement form?
## Lower limb garment options

### Additional topband section

**Advantage**

- Additional support for leg garments. Only possible along the slip form, longitudinally above the patella or longitudinally on the back of the thigh

### Open crotch

**Advantage**

- Pantyhose without gusset

### Maternity pantyhose

**Advantage**

- Compression pantyhose with front of panty top in 'knitted material' (no compressive fibres in the knitted fabric)

### Incorporation of zips

**Advantage**

- Can be added to help accommodate unusual shapes.

### Porous series – “half” compression

**Advantage**

- Reduced compression where garments are designed to overlap.

- Ensures correct pressure gradient at the overlapping junction with multi-part garments.
**Tips**

Additional attachments for the thigh may be necessary due to large circumferences, lax connective tissue, deep skin and joint folds as well as conical and cylindrical limbs.

**Ordering Information**

Where on the measurement form?

Please specify the type of top band.

**Tips**

During pregnancy, the circumference measurements of the legs show almost no changes if appropriate and optimum treatment is continued. In the abdominal area, however, sizes often change very rapidly. The gentle compression from the soft front panel is designed to accommodate this.

**Ordering Information**

Where on the measurement form?

Tick box under ‘Gusset’

**Tips**

For AD stockings the incorporation of a zip on the inside of the leg is recommended – this zip fastener is similar to the zip on a boot. For AF-AG garments no zip should be sewn on the inside of the thigh. Zips on a pant section can be positioned either on the lateral seams or centrally on abdomen.

**Ordering Information**

Where on the measurement form?

Mark the variant ATU with a cross.

**Tips**

Please specify the length of the porous rows.

**Ordering Information**

Where on the measurement form?

Please specify the length of zip and its position (inclusion of a diagram or picture can be useful here).

### Ordering Information

**Where on the measurement form?**

Mark the 'steep oblique' field with a cross.

---

**Tips**

medi always produces flat knit products with an oblique border at the proximal end.

The standard is 'flat oblique' = approx. 5% of the circumference. A 'steep oblique' = approx. 10% of the circumference can be selected as an option.

---

**Tips**

In most cases, the standard 160° bend is adequate.

For patients with, for example, paralysis who constantly hold their arm close to the body in a flexed position, the sleeve may be ordered with an angle of 135°.

---

**Tips**

If you order a CG sleeve + AC1 hand part together on one measurement sheet, the overlap zone of the glove will automatically be made porous from C – C1. With individual or follow-up orders, you must give the desired 'porous' cm separately.

**Where on the measurement form?**

Please state 'x cm porous'.

---

### Where on the measurement form?

Mark the 'steep oblique' field with a cross.

<tr>
<td>Additional topband section</td>
<td><strong>Advantage</strong>&lt;br&gt;Additional security of fit in the area of the oblique border&lt;br&gt;Optimum security of fit.</td>
</tr>
</tbody>
</table>
Tips
If local additional pressure is needed or if support is required to loosen fibrosis, we recommend the mediven 550 models. Lymph pads can be added at time of manufacturing or retrospectively.

Ordering Information
Where on the measurement form?
Please mark the appropriate selection. Show desired position/area with length and width.

Tips
Please always give us the exact size and positioning of the lining material. Lining material can also be sewn in later.

Where on the measurement form?
Please mark the appropriate selection. Show desired position/area with length and width.

Tips
For each model and each top band type medi uses the appropriate circumference conversion, i.e. the 'table measurements' for the top band are based on years of experience and numerous tests. If, in exceptional cases, it is necessary to fit a tighter or looser top band than usual, please show the appropriate circumference in cm after the variant.

Where on the measurement form?
Mark the required variant with a cross.

Tips
This additional top band can be incorporated as the only support or in addition to a top band. It can be incorporated at the time of manufacturing or retrospectively. For clients who cannot have the top band at 'G1', (particularly on the inside of the upper arm), this is the ideal support.

Where on the measurement form?
Mark the required variant with a cross.

Measuring leg garments
Correct fitting of compression stockings

In order to make an m2m garment we need to know the circumference measured at various points on the limb and exactly where they were measured (the length from a known point). Circumference and length measurements are taken in a distal to proximal direction. The measuring points on the leg must be marked so that the circumference and length measurements are taken at the same location. Our measurement forms are designed to make this process as simple as possible. Other details that we require as a minimum are the compression class and colour.

1. Foot circumference
   a) Leg is resting relaxed on a horizontal support
   b) During this measurement, the foot is relaxed, not held in a 90° position
   c) Measure circumference according to model being fitted

2. Foot length
   Open toe oblique border
   a) Measure lengths on the inside and outside of weight-bearing foot

3. Foot length
   Closed toe oblique border
   a) Measure lengths on inside, outside and entire weight-bearing foot
4. Foot length

Open toe straight border
a) Measure length on outside of weight-bearing foot

5. Foot length

Closed toe straight border
a) Measure length of entire, weight-bearing foot
b) Generally, this design is made to allow a 6 cm long toe area

6. Leg circumference

a) Leg is lying in a relaxed position on a horizontal support
b) Mark measuring points
c) For circumference measurement \(\text{cF}\), flex foot in dorsal direction to maximum extent
d) Measure the remaining circumferences up to \(\text{cF}\) with the leg in a relaxed position
e) For circumference measurement \(\text{cE}\), bend knee slightly

7. Leg length

a) Measure leg length along the inner side of the leg with patient standing up following the contours of the limb
8. Border on thigh
   a) Measure circumference \( eG \) at the top of the thigh/below crotch
   b) Measure length \( eG \) along the inner side of the leg with patient standing up
   c) Measure \( eK2 \) from ground to gluteal fold along body with patient standing up = posterior leg length
   d) Measure \( eK1 \) from ground to pubis symphysis along body with patient standing up = anterior leg length
      (Difference between \( eK1 \) and \( eK2 \) = high front/low back)

9. Waist/hip circumference length
   a) Measure circumference \( eK \) up at the widest section around both thighs below the gluteal fold with patient standing
   b) Measure circumference \( eH \) at the widest section of the hips with patient standing up
   c) Measure circumference \( eT \) at the waist or the desired waist border with patient standing up
   d) Measure length \( eH \) along body up to desired height = outer leg length to the waist following the contours

10. Waist/hip lengths
    a) Measure anterior pelvic height \( eK1T \) along body from pubis to waist or desired height following contours
    b) Measure posterior pelvic height \( eK2T \) along body from gluteal fold to waist or desired height following contours
Measuring toe caps
Flat knit
Tips for measuring for flat knit toe caps

Available as a one piece garment or as a seamless addition to a garment (see opposite).

1. Foot circumference
   a) Leg is placed flat on a support
   b) Mark the measuring points
   c) Measure circumference

2. Foot length
   a) Measure the length on the inside and outside of the foot
   b) Measuring the distance from mark to mark

3. Toe circumference
   a) Mark and measure circumference at web area
   b) For open toe toe caps mark and measure (where you wish the garment to finish). For closed toe toe caps measure the circumference around the end of the toe at the widest point as shown on the left. Measure the circumference

4. Toe lengths
   a) Measure length from web to the end of the toe for closed toe pieces, or to Z for open toe
Measuring hand and arm garments
Flat knit
**Tips for measuring hand / arm garments**

Measuring points for hand garments should be marked prior to measuring.

1. **Finger circumference**
   - a) Hand is resting lightly on a surface with the palm down
   - b) Mark and measure circumference \( X \) at the web between fingers
   - c) Mark and measure \( Z \) the point where you would like the garment to finish (usually nail bed).

2. **Finger length**
   - a) Hand is resting lightly on a surface with the palm down
   - b) Length is measured from the web to the mark at \( Z \)

3. **Hand circumference**
   - a) Hand should be pressed lightly on surface with the palm down
   - b) Mark the measuring points on the inside of the hand
   - c) Measure circumference

4. **Hand length**
   - a) Hand is resting lightly on a surface with the palm of the hand facing up
   - b) Length is measured from mark to mark
Tips for measuring hand / arm garments

5. Arm circumference

a) Lightly rest hand and forearm on a surface
b) Mark measuring points for length measurement
c) Measure circumference as shown in drawing

6. Arm length

a) Lightly rest hand and forearm on a surface.
b) All lengths are measured from C following the contour of the arm
7. Upper arm circumference

a) For the shoulder cap, measure from point G to H, where H is where the bra strap sits. Do not measure past the bra strap.

8. Attachments

a) Shoulder strap
   The length of the shoulder strap is measured according to method 1 or 2 (full circumference)

b) Anatomical shoulder caps are measured from the anterior to the posterior axillary fold (G1)
The m2m flat knit and round knit range is now summarised for you in tables showing which fabric, compression class and optional extras are available for each product type.

To provide a user-friendly order, the code numbers follow a logical system:

- **F** 3 4
  - **F** fabric
  - **3** product style
  - **4** compression class (1,2,3)
